IMPORTANT SAFETY INFORMATION. READ ALL INSTRUCTIONS BEFORE USING.

⚠ WARNING!

For your safety, the information in this manual must be followed to minimize the risk of fire or explosion, electric shock, or to prevent property damage, personal injury, or loss of life.

SAFETY PRECAUTIONS

- This Zoneline must be properly installed in accordance with the Installation Instructions before it is used. See the Installation Instructions in the back of this manual.
- Immediately repair or replace all electric service cords that have become frayed or otherwise damaged.
- Unplug or disconnect the Zoneline at the fuse box or circuit breaker before making any repairs.

NOTE: We strongly recommend that any servicing be performed by a qualified individual.

Replacing an existing unit?

For details, see the Installation Instructions in this manual.

READ AND FOLLOW THIS SAFETY INFORMATION CAREFULLY.

SAVE THESE INSTRUCTIONS

About the controls on your Zoneline.

ge.com

Controls

About Your Heat Pump

Heat pumps can save money by removing heat from the outside air—even when the outside temperature is below freezing—and releasing that heat indoors.

To get the best performance from your heat pump, don't change the room thermostat very often. Raising the heat setting 2–3 degrees will cause the Zoneline to use its electric heating elements in order to reach the new temperature setting quickly.

There is a three minute minimum compressor run time at any setting to prevent short cycling. The indoor fan motor starts before the compressor and stops after the compressor cycles off.

The electric heating elements use much more electricity than heat pumps and cost more to operate.

| Safety Instructions | Operating Instructions | Care and Cleaning | Troubleshooting Tips | Consumer Support |
|---------------------|------------------------|-------------------|----------------------|------------------|
|---------------------|------------------------|-------------------|----------------------|------------------|

Other features your Zoneline may have.

Ventilation Control

The ventilation control lever is located at the upper left side of the Zoneline unit, behind the room cabinet.

NOTE: The vent door shipping hardware must be removed before using the vent control lever.
See the Installation Instructions in this manual.

When set at the closed position, only the air inside the room is circulated and filtered.

When set at the open or middle position, some outdoor air will be drawn into the room. This will reduce the heating or cooling efficiency.

Energy Tip: Keep the vent control at the closed position. The room air will be filtered and circulated.

To Remove the Room Cabinet

Additional controls are located behind the room cabinet.

To remove: Pull out at the bottom to release it from the tabs (1). Then lift up (2).

To replace: Place the tabs over the top rail (1). Push inward at the bottom until it snaps into place (2).

Air Direction

To adjust the air direction, remove the room cabinet. Remove the 7 louver screws that hold the louver insert in place. Flip the louver insert 180°, replace the screws and the room cabinet.

Remove the room cabinet and flip the louver insert to change the air direction.

Auxiliary Controls on your Zoneline.

ge.com

Auxiliary Controls – Dip Switches

The auxiliary dip switch controls are located behind the room cabinet, through an opening below the control panel.

Remove the room cabinet. See the *To Remove the Room Cabinet* section.

The factory settings will be in the **DOWN** position.

The owner is responsible for checking switches and ensuring they are in the desired position.

All Electric Heat

When this switch is enabled (**UP**), heat pump operation is locked out, causing the unit to provide only electric resistance heat.

Cooling–Smart Fan

When this switch is enabled (**UP**), it allows the indoor fan to cycle on/off with the compressor. When this switch is disabled (**DOWN**), it allows the indoor fan to run continuously.

Heating–Smart Fan

When this switch is enabled (**UP**), it allows the indoor fan to run continuously. When this switch is disabled (**DOWN**), it allows the indoor fan to cycle on/off with the heat pump or heater operation.

Safety Instructions

Operating Instructions

Care and Cleaning

Troubleshooting Tips

Consumer Support

Auxiliary controls on your Zoneline.

Remote Thermostat-Class 2

When this switch is enabled (**UP**), it allows the unit to operate off of a Class 2 Remote Control Wall Thermostat. The unit controls are disabled.

Load Shedding (CDC)

This feature is active only if the unit is in CDC mode. When this switch is enabled (**UP**), the indoor fan can be turned ON or OFF with the unit controls.

Freeze Sentinel

When this switch is enabled (**UP**), it turns OFF the freeze sentinel protection feature. With the switch disabled (**DOWN**), the freeze sentinel is activated which automatically provides heat without user interface. This helps to prevent plumbing damage by turning the heater and indoor fan ON at 41° F and OFF at 46°F.

Temperature Limiting

Temperature limiting can reduce energy costs by limiting the lowest temperature that can be set for cooling and the highest temperature that can be set for heating. Temperature limiting is controlled by switches 1–6 on the second block

of auxiliary controls. The first three switches are used to select the cooling limits. The next three switches are used to control the heating limits. This feature is not available with the Remote Thermostat-Class 2.

| Temperature limiting during COOL mode (all temperatures shown in °F) | | | |
|---|-------------|----------------|----------------|
| UP | DOWN | Minimum | Maximum |
| NONE | 1, 2, 3 | 60° | 85° |
| 1 | 2, 3 | 64° | 85° |
| 1, 2 | 3 | 66° | 85° |
| 2 | 1, 3 | 68° | 85° |
| 2,3 | 1 | 70° | 85° |
| 1, 2, 3 | NONE | 72° | 85° |
| 1, 3 | 2 | 74° | 85° |
| 3 | 1, 2 | 76° | 85° |

| Temperature limiting during HEAT mode (all temperatures shown in °F) | | | |
|---|-------------|----------------|----------------|
| UP | DOWN | Minimum | Maximum |
| NONE | 4, 5, 6 | 60° | 85° |
| 4 | 5, 6 | 60° | 80° |
| 4, 5 | 6 | 60° | 78° |
| 5 | 4, 6 | 60° | 76° |
| 5,6 | 4 | 60° | 74° |
| 4, 5, 6 | NONE | 60° | 72° |
| 4, 6 | 5 | 60° | 70° |
| 6 | 4, 5 | 60° | 65° |

Heat Boost

When this switch is enabled (**UP**) and outdoor temperatures are between 20° F and 46° F, heat pump only operation is locked out. This setting is used to provide supplementary heat to the heat pump operation in conditions where the heat pump only operation is not sufficient to maintain a consistent, comfortable room temperature to the consumer.

Diagnostics Check—For Technician's Use Only

When this switch is enabled (**UP**), the unit will go through an operations check of all components, which takes about 3 minutes (176 seconds). This diagnostic tool is intended for use by a qualified technician.

Auxiliary controls on your Zoneline.

Auxiliary Controls-Terminal Connections

The auxiliary controls are located behind the room cabinet below the control panel.

- 1** Remove the room cabinet. See the *To Remove the Room Cabinet* section.
- 2** Remove the screws from the lower panel front cover and lift the panel off.
- 3** After all desired settings have been made, replace the panel and room cabinet by reversing the above steps.

The owner is responsible for making all connections and setting the appropriate dip switches.

Insert the building hook-up wires into the bottom of the terminal and tighten screw securely to make the desired connections.

CAUTION:

Improper wiring may damage the Zoneline electronics. No common busing is permitted. Damage or erratic operation may result. A separate wire pair must be run from each separate controlling switch to each individual Zoneline.

Motion Sensor (Obtained locally)

When connected, the wall mounted motion sensor will detect motion in the room and automatically turn the unit ON or OFF.

The door and motion sensors work together to automatically turn the unit ON or OFF.

Safety Instructions**Operating Instructions****Care and Cleaning****Troubleshooting Tips****Consumer Support****Door Sensor (Obtained locally)**

When connected, the door sensor will detect when the door in the room was opened or closed. This feature must be used in conjunction with the motion sensor.

The door and motion sensors work together to automatically turn the unit ON or OFF.

**External Fan (Obtained locally)**

When connected, an auxiliary or external fan can be controlled with the indoor fan motor on the Zoneline. Connections provide 24 V AC to energize a remote relay, turning on the external fan.

**Central Desk Control**

When connected, the unit can be turned ON or OFF with a switch located at the Central Control Panel. A separate wire pair must be run from each separate controlling switch to each individual Zoneline.

**Remote Thermostat**

When connected, the unit will be controlled by a remote thermostat.

NOTE: The number 4 dip switch must be in the enabled (**UP**) position to activate the remote thermostat. (See the installation instructions supplied with the remote thermostat).

IMPORTANT:

The Zoneline thermostat connections provide 24 V AC only.

If using a digital/electronic wall thermostat, you must set it to the 24 V AC setting. See the Installation Instructions for the wall thermostat.

**A CAUTION:**

Damage to a wall thermostat or to the Zoneline electronics can result from improper connections. Special care must be used in connecting blue and black wires. No line voltage connections should be made to any circuit. Isolate all wires in building from line voltage.

Care and cleaning.

Outdoor Coils

The coils on the outdoor side of the Zoneline should be checked regularly. If they are clogged with dirt or soot, they may be professionally steam cleaned, a service available through your GE service outlet. You will need to remove the unit to inspect the coils because the dirt build-up occurs on the inside.

Clean the outside coils regularly.

Base Pan

In some installations, dirt or other debris may be blown into the unit from the outside and settle in the base pan (the bottom of the unit).

In some areas of the United States a "jell-like" substance may be seen in the base pan.

Check it periodically and clean, if necessary.

To maintain optimum performance, clean the filters at least every 30 days.

Air Filters

Dirty filter—Needs cleaning

Clogged filter—Greatly reduces cooling, heating and airflow.

To remove the air filters:

Turn the Zoneline off before cleaning.

The most important thing you can do to maintain the Zoneline is to clean the filter at least every 30 days. Clogged filters reduce cooling, heating and air flow.

Keeping these filters clean will:

- Decrease cost of operation.
- Save energy.
- Prevent clogged heat exchanger coils.
- Reduce the risk of premature component failure.

To clean the air filters:

- Vacuum off the heavy soil.
- Run water through the filters.
- Dry thoroughly before replacing.

To replace the air filters:

CAUTION: Do not operate the Zoneline without the filters in place. If a filter becomes torn or damaged it should be replaced immediately.

Operating without the filters in place or with damaged filters will allow dirt and dust to reach the indoor coil and reduce the cooling, heating, airflow and efficiency of the unit.

Replacement filters are available from your salesperson, GE dealer, GE Service and Parts Center or authorized Customer Care® servicers.

Installation Instructions

Zoneline Air Conditioners

Questions? Call 800.GE.CARES (800.432.2737) or Visit our Website at: ge.com

BEFORE YOU BEGIN

Read these instructions completely and carefully.

- **IMPORTANT** — Save these instructions for local inspector's use.
- **IMPORTANT** — Observe all governing codes and ordinances.
- **Note to Installer** — Be sure to leave these instructions with the owner.
- **Note to Owner** — Keep these instructions for future reference.
- Proper installation is the responsibility of the installer.
- Product failure due to improper installation is not covered under the Warranty.

TOOLS YOU WILL NEED

Phillips screwdriver

IMPORTANT ELECTRICAL SAFETY—READ CAREFULLY

▲ CAUTION:

- Follow the National Electrical Code (NEC) or local codes and ordinances.
 - For personal safety, this Zoneline must be properly grounded.
 - Protective devices (fuses or circuit breakers) acceptable for Zoneline installations are specified on the nameplate of each unit.
 - Do not use an extension cord with this unit.
 - Aluminum building wiring may present special problems—consult a qualified electrician.
 - When the unit is in the STOP position there is still voltage to the electrical controls.
 - Disconnect the power to the unit before servicing by:
 - 1 Removing the power cord (if it has one) from the wall receptacle.
- OR
- 2 Removing the branch circuit fuses or turning the circuit breakers off at the panel.

ZONELINE COMPONENTS

Installation Instructions

REPLACING AN EXISTING UNIT?

Use the correct wall case

This unit is designed to be installed in a GE plastic or insulated metal wall case. This minimizes condensation from forming on the room side of the case.

If the current wall case is not insulated, you can reduce the possibility of condensation forming by installing insulation kit RAK901L, available where you purchased the unit.

Use the correct outdoor grille

You should use the outdoor grilles shown on the "Essential Elements" label on the top of the unit.

- If an existing grille is not replaced, capacity and efficiency will be reduced and the unit may fail to operate properly or fail prematurely. A deflector kit, RAK40, may be used with grilles that were not designed for your new GE Zonelines. The RAK40 contains air deflectors and gaskets that mount to the unit to direct the hot exhaust air away from the air intake to allow the unit to function properly. The grille must have a 65% minimum free area.
- Any vertical deflectors in the existing rear grille should be removed to decrease condenser air recirculation which can cause the unit to "short-cycle" and lead to premature component failure.

Installation Instructions

230/208 VOLT ELECTRICAL SUPPLY

HOW TO CONNECT

- 1 Remove the room cabinet.
- 2 Connect to electrical power.
- 3 See the special instructions below for applicable supply voltages.
- 4 Reinstall the room cabinet.

Power cords may include an arc fault interruption or a leakage current detection interruption device. A test and reset button is provided on the plug case or the inline case. The device should be tested on a periodic basis by first pressing the TEST button and then the RESET button. If the TEST button does not trip or if the RESET button will not stay engaged, discontinue use of the Zoneline and contact a qualified service technician.

A power supply kit must be used to supply power to the Zoneline unit. The appropriate kit is determined by the voltage, the means of electrical connection and the amperage of the branch circuit.

Power supply kit

Connections of 208 or 230 volt circuits may be with a power supply kit or a junction box kit.

All wiring, including installation of the receptacle, must be in accordance with the NEC and local codes, ordinances and regulations. Local codes may require the use of an arc fault or leakage current detection device on the power cord. Be sure to select the correct cord for your installation.

Tandem
15 Amp.

Perpendicular
20 Amp.

Large Tandem
30 Amp.

230/208 volt receptacle configuration.

| Branch Circuit and Unit Amperage Rating | Proper GE Power Cord with LCDI Device |
|---|---------------------------------------|
| 15 | RAK3153 |
| 20 | RAK3203 |
| 30 | RAK3303* |

*Not approved for use on 7000 BTU models.

IF USING AN ELECTRICAL SUBBASE

230/208 volt models may be installed using one of the following electrical subbases:

| Branch Circuit and Unit Amperage Rating | Proper GE Subbase Kit |
|---|-----------------------|
| 15 | RAK204D15P |
| 20 | RAK204D20P |
| 30 | RAK204D30P* |

*Not approved for use on 7000 BTU models.

Electrical subbases provide an enclosure for direct connection or enclosed receptacles. The subbase kit includes the power cord.

The instructions provided with the selected subbase kit must be carefully followed. It is the responsibility of the installer to ensure the connection of components is done in accordance with these instructions and all electrical codes.

Installation Instructions

265 VOLT ELECTRICAL SUPPLY

WARNING:

Connection of this 265 V AC product to a branch circuit **MUST** be done by direct connection in accordance with the National Electric Code. Plugging this unit into a building mounted exposed receptacle is not permitted by code.

These models must be installed using the appropriate GE power supply kit for the branch circuit amperage and the electrical resistance heater wattage desired. See the POWER CONNECTION CHART in these Installation Instructions. One of the following installation methods must be used:

- A** Electrical subbase kits are available to provide a flexible enclosure for direct connection.

| Branch Circuit and Unit Amperage Rating | Proper GE Subbase Kit | Power Supply Kit |
|---|-----------------------|------------------|
| 15 | RAK204E15 | RAK5172 |
| 20 | RAK204E20 | RAK5202 |
| 30 | RAK204E30 | RAK5302 |

The instructions provided with the selected subbase kit must be carefully followed. It is the responsibility of the installer to ensure the connection of components is done in accordance with these instructions and all electrical codes.

- B** For direct connection to branch circuit wiring inside the provided junction box without using a subbase kit, cut the cord, strip the wire ends and connect as follows.

1 REMOVE JUNCTION BOX

- 1 Remove the junction box cover by taking out the front four screws.
- 2 Remove the junction box by taking out the top rear screw. Note how the tab on the lower right corner of the junction box serves to hold the side in place. This will help when the box is being reinstalled. The cord will be coiled up inside the junction box.

2 CUT AND STRIP THE CORDSET

- 1 Remove the cordset from the power supply kit. Measure 6" down the cord from where it emerges from the back of the nylon plastic connector and cut the cord through at this point.
- 2 Carefully remove 3" of the cordset insulation so as to expose the three insulated wires.
- 3 Strip 3/4" of the insulation away at the end of each of the three wires (L1, Neutral and Ground). Plug the connector fully into place in the unit mating connector. Be sure the locking tabs at the sides are engaged.

NOTE: Order Kit RAK4002CW to enable a quick disconnect inside the junction box.

3 ATTACH CONDUIT

- 1 Use the round knockout at the bottom of the junction box to attach conduit coming from the branch circuit. Remove the knockout, attach the conduit and bring wires into the junction box. Leave 6" of wire free at the end of the conduit to allow connections to be made.

- 2 If a fuse and fuseholder are to be used, the knockout at the top of the box is for mounting a Buss Fuseholder. Be sure the fuse and fuseholder are of the same rating as the branch circuit. Leadwires at the fuse can be either soldered in place or attached using UL-listed 1/4" female (receptacle) crimp connectors.

Installation Instructions

265 VOLT ELECTRICAL SUPPLY

4 REINSTALL JUNCTION BOX

- Reinstall the junction box by engaging the tab at the lower rear, aligning the screw hole at the top and driving the one screw until secure. Be sure that all wire leads are inside the box and not pinched between the box and the unit. The green insulated ground wire from the unit **MUST** be connected to the branch circuit ground wire.

Make all wire connections by using appropriate UL-listed electrical connectors and techniques (black to black, white to white and green to green).

5 REINSTALL JUNCTION BOX COVER

- Carefully tuck all wires and connections back inside the junction box. Be sure there are no loose connections or stray uninsulated wires exposed.
- Place the junction box cover in place. Replace the two screws removed earlier and tighten securely.
- Discard the unused portion of the plug and the cordset.

POWER CONNECTION CHART

230/208 Volt

| Power Supply Kits | Wall Plug Configuration | Circuit Protective Device | Heater Wattage @ 230/208 Volts |
|-------------------|-------------------------|-----------------------------------|--------------------------------|
| RAK3153 | Tandem | 15 Amp Time Delay Fuse or Breaker | 2.55/2.09 KW |
| RAK3203 | Perpendicular | 20 Amp Time Delay Fuse or Breaker | 3.45/2.82 KW |
| RAK3303* | Large Tandem | 30 Amp Time Delay Fuse or Breaker | 5.00/4.10 KW |

265 Volt

| Power Supply Kits | Wall Plug Configuration | Circuit Protective Device | Heater Wattage @ 265 Volts |
|-------------------|-------------------------|-----------------------------------|----------------------------|
| RAK5172 | Does Not Apply | 15 Amp Time Delay Fuse or Breaker | 2.55 KW |
| RAK5202 | Does Not Apply | 20 Amp Time Delay Fuse or Breaker | 3.45 KW |
| RAK5302* | Does Not Apply | 30 Amp Time Delay Fuse or Breaker | 5.0 KW |

* Not recommended for use on 7000 BTUH units.

Installation Instructions

INSTALLING THE ZONELINE

1 INSTALL THE WALL CASE AND EXTERIOR GRILLE

- 1 The RAB71 series or RAB77 wall case must be properly installed per instructions packed with the case.
- 2 Remove the corrugated stiffener and the outdoor protective panel. Use the slit in the outdoor panel as a handhold and push out.

- 3 Install the exterior grille from the room side following instructions packed with the grill.

Insulated Wall Case

This unit is designed to be installed in a GE plastic or an insulated steel wall case. This minimizes condensation from forming on the room side of the case.

The RAB71 series wall cases are insulated. Insulation kit RAK901L is available for use with RAB77 or existing uninsulated wall cases when needed.

NOTE: For installation with a subbase, see the instructions packed with that kit.

2 PREPARE THE ROOM CABINET

- 1 Carefully remove shipping tape, if there is any, from the room cabinet and vent door.

- 2 Remove the shipping screw/clamp from the vent door, if present.

- 3 Remove the room cabinet by pulling it out at the bottom to release it (1), then lift it up to clear the rail along the unit top (2).

3 INSTALL THE UNIT INTO THE WALL CASE

Slide the unit into the wall case and secure with four screws through the unit flange holes.

Before You Call For Service...

ge.com

Troubleshooting Tips

| Problem | Possible Causes | What To Do |
|---|--|--|
| Zoneline does not start | <p>The unit is unplugged.</p> <p>The fuse is blown/circuit breaker is tripped.</p> <p>The unit is waiting for the compressor overload protector to reset.</p> <p>Power failure.</p> <p>The current interrupter device is tripped.</p> | <ul style="list-style-type: none"> Make sure the Zoneline plug is pushed completely into the outlet. Check the house fuse/circuit breaker box and replace the fuse or reset the breaker. This is normal. The Zoneline will start again after it resets. <ul style="list-style-type: none"> There is an automatic delay start feature that may not allow the unit to start, after power is restored and the unit is turned back on, for approximately 30 seconds. There is a protective time delay (up to 3 minutes) to prevent tripping of the compressor overload. For this reason, the unit may not start normal heating or cooling for 3 minutes after it is turned back on. Press the RESET button located on the power cord plug or the box near the plug. If the RESET button will not stay engaged, discontinue use of the Zoneline and contact a qualified service technician. |
| Zoneline does not cool or heat as it should | <p>Indoor airflow is restricted.</p> <p>Outdoor airflow is restricted or recirculated.</p> <p>The temp control may not be set high enough.</p> <p>The air filter is dirty.</p> <p>The room may have been hot or cold.</p> <p>Outdoor air is entering the room.</p> | <ul style="list-style-type: none"> Make sure there are no curtains, blinds or furniture blocking the front of the Zoneline. Make sure the rear grille is not restricted. This can cause the unit to cycle off due to the compressor overload. Outdoor grille must have a minimum of 65% free area. Non-GE grilles may be too restrictive for proper performance. Consult your salesperson for assistance. Turn the control to a lower or higher setting. NOTE: The temperature limiter may be limiting the temperature range. Clean the filter at least every 30 days. See the <i>Operating Instructions</i> section. When the Zoneline is first turned on you need to allow time for the room to cool down or warm up. Set the vent control to the CLOSE position. |
| Burning odor at the start of heating operation | Dust is on the surface of the heating element. | <ul style="list-style-type: none"> This can cause a “burning” odor at the beginning of the heating operation. This odor should quickly fade. |
| The air is not always cool or hot during operation | <p>The heat pump is not producing hot air.</p> <p>The fan switch may be set at continuous fan</p> | <ul style="list-style-type: none"> This is normal. The heat pump will produce warm air but not as hot as air produced when the higher-cost electric heat is used. This causes the fan to blow room temperature air even when the compressor or heater cycles off. The continuous air movement provides better overall temperature control. |

Safety Instructions

Operating Instructions

Care and Cleaning

Troubleshooting Tips

Consumer Support

Before You Call For Service...

Troubleshooting Tips

| Problem | Possible Causes | What To Do |
|---|--|---|
| The air does not feel warm enough during heating operation | The heat pump alone produces air that feels cooler than desired. | <ul style="list-style-type: none"> Use the Electric Heat Option. This turns off the heat pump and warms with electric heat only. <p>NOTE: Use of this option will result in increased energy consumption.</p> |
| Temperature display flashes | The compressor may have failed. | <ul style="list-style-type: none"> Set the mode control to STOP and then restart the unit. If the flashing light reappears within 30 minutes, call for service. |

Things that are normal.

Normal Operating Sounds

You may hear a pinging noise caused by water being picked up and thrown against the condenser on rainy days or when the humidity is high. This design feature helps remove moisture and improve efficiency.

You may hear relays click when the controls cycle on and off or are adjusted to change the room temperature.

Water will collect in the base pan during high humidity or on rainy days. The water may overflow and drip from the outdoor side of the unit.

The indoor fan runs continuously when the unit is operating in the cooling mode, unless the fan switch behind the room cabinet is set at fan cycle (up). This will cause the fan to cycle on and off with the compressor. You may also hear a fan noise stop and start.

You may notice a few minutes delay in starting if you try to restart the Zoneline too soon after turning it off or if you adjust the thermostat right after the compressor has shut off. This is due to a built-in restart protector for the compressor that causes a 3-minute delay.

During the defrost cycle, both indoor and outdoor fans stop and the compressor will operate in the cooling mode to remove frost from the outdoor coil. After defrost, the unit will restart in electric heat to quickly warm the room to the desired comfort level.

To protect the compressor and prevent short cycling, the unit is designed to run for a minimum of 3 minutes, after the compressor starts at any thermostat setting.

| For The Period Of: | GE Will Replace: |
|--|--|
| One Year <i>From the date of the original purchase</i> | Any part of the Zoneline which fails due to a defect in materials or workmanship. During this full one-year warranty , GE will also provide, free of charge , all labor and on-site service to replace the defective part. |
| Five Years <i>From the date of the original purchase</i> | Any part of the sealed refrigerating system (the compressor, condenser, evaporator and all connecting tubing) which fails due to a defect in materials or workmanship. During this full five-year sealed refrigerating system warranty , GE will also provide, free of charge , all labor and on-site service to replace the defective part. |
| Five Years <i>From the date of the original purchase</i> | For the second through the fifth year from the date of original purchase, GE will replace certain parts that fail due to a defect in materials or workmanship. Parts covered are fan motors, switches, thermostats, heater, heater protectors, compressor overload, solenoids, circuit boards, auxiliary controls, thermistors, frost controls, ICR pump, capacitors, varistors and indoor blower bearing. During this limited four-year parts warranty , you will be responsible for any labor or on-site service costs. |

What GE Will Not Cover:

- Service trips to your site to teach you how to use the product.
- Improper installation.

If you have an installation problem, or if the air conditioner is of improper cooling capacity for the intended use, contact your dealer or installer. You are responsible for providing adequate electrical connecting facilities.
- In commercial locations, labor necessary to move the unit to a location where it is accessible for service by an individual technician.
- Failure or damage resulting from corrosion due to installation in an environment containing corrosive chemicals.
- Replacement of fuses or resetting of circuit breakers.
- Failure of the product resulting from modifications to the product or due to unreasonable use including failure to provide reasonable and necessary maintenance.
- Failure or damage resulting from corrosion due to installation in a coastal environment, except for models treated with special factory-applied anti-corrosion protection as designated in the model number.
- Damage to product caused by improper power supply voltage, accident, fire, floods or acts of God.
- Incidental or consequential damage to personal property caused by possible defects with this air conditioner.

This warranty is extended to the original purchaser and any succeeding owner for products purchased for use within the USA and Canada. In Alaska, the warranty excludes the cost of shipping or service calls to your site.

Some states or provinces do not allow the exclusion or limitation of incidental or consequential damages. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state or province to province. To know what your legal rights are, consult your local, state or provincial consumer affairs office or your state's Attorney General.
